

**Maine ek short handheld video after effect me import ki. Camera shake ko reduce karne ke liye maine Warp Stabilizer effect apply kiya. Sabse pehle maine Smooth Motion option test kiya, jisse camera ki natural movement bani rahi aur unwanted shakiness remove ho gayi. Uske baad maine No Motion option try kiya, jisme camera ek hi position par lock ho gaya, lekin frame thoda zyada crop ho gaya. Maine alag-alag Smoothness values bhi test ki (10%, 20%, aur 50%). Mujhe 20% Smoothness sabse best laga kyunki isme stability aur natural movement ka achha balance mila. Maine ye bhi notice kiya ki Smoothness value zyada karne par frame aur zyada crop hone laga aur edges par thodi distortion bhi dikhne lagi.**
